Full stack Node.js/React developer

IndigoVerge (https://indigoverge.com/) is a web, mobile and cloud solutions studio, developing tailored solutions for our customers. Our portfolio holds projects in the sphere of health, finance, marketing automation, e-commerce, tourism and travel, document management and much more, developed for clients such as ETM, Microsoft, UltraFlex, Nemetschek, Eurosys and others.

In the recent years the company has developed an expertise in a new sector – Internet of Things, and particularly in Industrial IoT and SCADA applications, building of solutions for energy consumption monitoring, for connected devices, data analysis, device and application management and others.

Throughout those 12 years of operation the clients we served have become our partners. Thanks to the IT solutions developed for them, using IoT, Cloud and Big Data, they have grown their business, achieving substantial results. We are glad that they are now trusting us as their ongoing IT solution provider. The formula for this successful business relationship with our customers is: open communication plus individual approach, in-depth analysis and thorough study of each project challenge from a technological and business aspect. Throughout the implementation phase of our project we proactively approach each milestone, proposing realistic, pragmatic, technologically advanced and financially efficient solutions. To us professionalism means high-quality results delivered on time.

Following the expansion of our activities, we are looking to onboard a new team member on the position of **Full stack Node.js/React developer.**

Responsibilities:

- Developing React/Redux based front end application and Node.js-based back-end with MongoDB
- Refactoring of existing code
- Implementing unit tests
- Collaborate with product managers and customers to gather and define requirements
- Deliver features on-time and up to specification with an appropriate level of quality
- Demonstrate ownership of tasks and assignments
- Troubleshoot and resolve problems

WHAT IS REQUIRED:
Essential:

- Good knowledge of JavaScript (at least 1 year of experience, including everything released post-ES6)
- Good knowledge of web development with React and Redux
- Experience with NodeJS and NoSQL - MongoDB
