

Satellite receiver tester at Bianor

Our team in Sofia designs and implements software solutions for a big broadcast satellite service provider in the USA. We are now hiring for a team which tests one of the core systems, used by millions of customers – the Set-top-box software.

Working in the team will give you insights about the technical and business challenges which broadcast companies face, and what solutions they employ. There are some technical skills needed to do the job and if you don't have them yet you will be trained as part of the working process, e.g. Linux commands, bug tracking software etc.

The workplace

On your desk you will mostly work with:

- Several home satellite receivers with remote controls;
- Two or three TV screens connected to the receivers;
- A workstation with specialized software for setting things up and for documenting the activities.

Your Role

- Be part of a team who tests home satellite equipment's software against given test scenarios;
- Extract useful information from the tested devices and then write the findings down;
- Keep the testing documentation in a good shape.

What We Are Looking For

Personal and technical skills:

- Curious about technology and willing to learn new things;
- Attention to details;
- Computer literacy at a "user" level – ability to launch and use software applications on PCs and smartphones.
- Able to explain clearly in writing what went wrong when tests fail;
- Patience to understand and follow written instructions (the test scenarios mainly);
- Patience to perform repetitive tasks and to dig deeper into issues when necessary.

Other prerequisites:

- Fluent in written English.

The attitude we like:

- Team oriented;
- Able to work independently with attention to details;
- Intellectually curious and lifelong learner;
- Ready to share a joke and a good laugh :-)

About Bianor

Bianor is a recognized authority on video solutions and is dedicated to helping businesses take full advantage of technology.

For about 20 years we have been designing and developing unique software solutions for the leading technology, media, and telecommunication companies.

Bianor employs highly skilled staff in its New York and Sofia offices. The company is NATO AQAP 2110 & 2210 and ISO 9001:2015 certified and has twice been awarded the Innovative Enterprise of the Year Award and the LISA Top Product Award, among other industry recognition.

If you feel that this position is the right one for you, please send your CV to galena.v.todorova@bianor.com
